A Summer Project Report Submitted to

Faculty of Management, Tribhuvan University

In partial fulfillment of the requirements for the degree of

Bachelor of Information Management

Gongabu, Kathmandu

June 9 2024

STUDENT DECLARATION

This is to certify that I have completed the Summer Project entitled “**Online Book Store**” under the guidance of “Mr. Chakra Narayan Rawal” in partial fulfillment of the requirements for the degree of **Bachelor of Information Management** at Faculty of Management, Tribhuvan University. This is my original work and I have not submitted it earlier elsewhere.

Date: 2081/02/20

Signature: _____

Name: Sunil Rawat

ACKNOWLEDGEMENT

I am very grateful towards Faculty of Management, Tribhuvan University (TU) who provided such an opportunity to bring our knowledge practically through Summer Project. I would like to acknowledge and thank Mr. Chakra Narayan Rawal, supervisor of Summer Project, for his proper guidance and contribution to bring this project in this particular shape and form. I fondly acknowledge my parent for their endurance and encouragement, which I greatly needed most of the time.

I have taken utmost care to terminate errors according to my best visibility but I shall be obliged if they are pointed out. Besides, I shall accept any constructive suggestion and criticism for the improvement in future.

EXECUTIVE SUMMARY

I have finished summer project on SK Traders organization on Online Book Store. This project completion period was about a couple of weeks but it also involved in a lot of learning activities all around. I also carried a couple of research which involved in preparing questionnaires, collecting data and some statistics on the based project.

The system basically involves in dealing with the order of the book and buying the product and giving feedback on the service of the organization which will help to grow the organization. Also to add, the system displays services about the authors and direct links to their media if the user want to connect. In addition, the customer can cancel the order.

Admin and User side are the divided categories of the project. To look this website, the user can add to cart the desired book and order by proceeding to checkout and admin can confirm the order by completing the transaction. In addition, the customer can give feedback on message panel created where admin see's and finds a room for improvement.

The project objective is to assure the providence of quality books via delivery. This project will be able to store the data in the database and keep the record of the customer and also help to provide information about the services and facilities of the site. The admin can take action by selecting any and changing their current order status to pending or completed. The system also calculates the order placed, total pendings, completed payments, products added, normal users, admin users, total accounts and new messages.

CHAPTER ONE

INTRODUCTION

1.1 Background of the study

Project helps to know about real-life working scenario. It helps to understand about the qualitative data. This summer project helps students to increase the efficiency in changing technological world. It helps me to know about the operational and functional mechanism of such organization. The candidate can be well prepared for internship program. With the help of this summer project, students can reflect and integrate their learning over their overall semester of study and create an innovative in an area of their interest related to any area of business administration and Information Technology. The main goal of Summer Project is that through the assignment students can gain the new ideas, innovation into the real world.

It is an opportunity to grow network and public relation. It helps to develop a critical thinking and enhance the quality to solve any problem. Therefore, it is most important for the students to work on this project for the self-development of communication skill and experiencing the working environment.

With the rapid growth of technology, a website for a business has become essential and has become a demand for any business to grow and prosper in the environment. The project aims to develop an interactive and user friendly website for online books buying platform, targeting reading platform.

Despite having the increase in reliance of digital platform, many existing website have poor customer involvement, payment issues, accessibility and modern design. This often results in poor user experience. It is shown that 60% of the user don't use website that is difficult to navigate. So, this project aims to create a flexible website for the customer.

1.2 Introduction of the Organization

SK Traders is located at Lazimpat, Kathmandu, established in 2015 A.D. SK Traders is owned by Ms. Shrijana Khatiwada, with the objective of providing books and was initially a stationary. Later on, the owner decided to expand the business and make it a book business due to opportunities arising in the market. The SK Traders makes sure the client has access to the newest release of books of the market. Additionally, the company is proud of its services provided over the past few years.

1.2.1 Current Situation of the Organization

In current situation of the organization, it is selling books in the situated environment. It faces a challenges in managing books and selling books online by not having a digital platform which results in delays in providing books. This technology will help to monitor and manage their expenses efficiently, do delivery in the given address and help in making a productive environment. Ultimately, the adoption of such a system has a potential to improve efficiency in the working environment.

1.3 Problem Definition

The organization uses pen and paper to take down the book order by the customer and had to call to get their location. Also, there is no online book selling which made the clients uneasy to purchase from the shop. Sometimes, it would also be hectic for the staffs to deliver the book without knowing the location and created a waste of time to call on the phone for the location.

1.4 Objectives of the Project

The objective of the project is to develop a website that allows the clients or buyers to order the desired books and provide a location for the book to be ordered. The following points simplifies the objectives more clearly:

- To increase efficiency and improve services provided to customers through better application of technology in daily operations.
- To enable the customer to add to cart the desired books and buy whenever they want.
- To increase speed, sales volume and customer satisfaction.
- To enable the administrator to add the book or delete as their own need.
- To improve efficiency and compatible.

1.5 Methodology

It is necessary to include a consideration of the concepts and theories which underline the methodology is the systematic, theoretical analysis of the methods applied to the study. It comprises the theoretical analysis of the body of the methods and principles associated with a brand of knowledge.

1.5.1 Project Framework

It is the combination of processes, tasks and tools used to perform to complete a project from start to finish. The important on this is systematic planning and implementation to complete system in time.

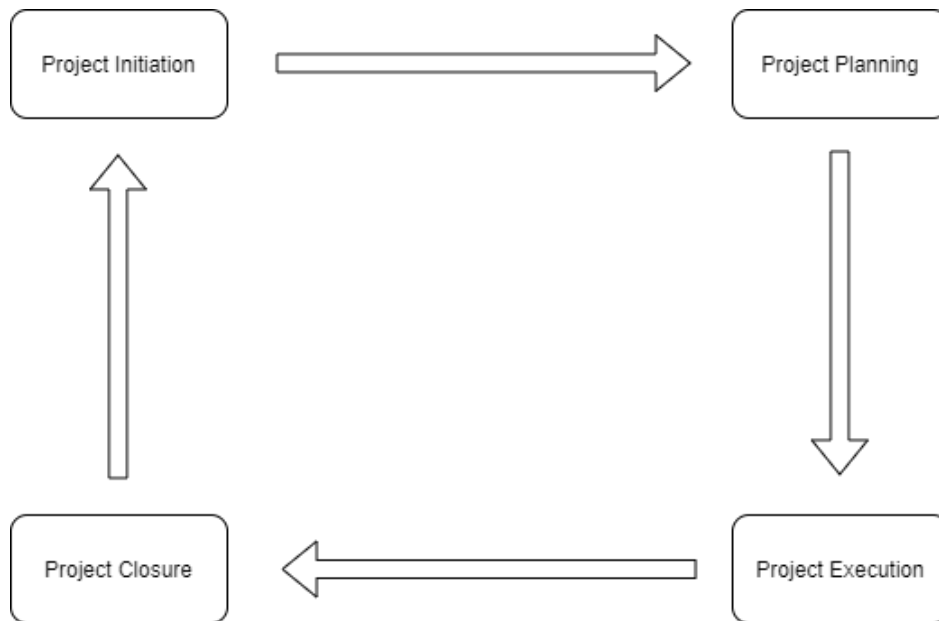

Fig: Project Framework

- **Project Initiation:** The Project Initiation is the first phase of Project Life Cycle, as it involves starting up a new project. In this phase, I studied and researched the need for the online bookstore by highlighting market demand and competitive advantages. Also, I outlined the project objectives, scope, stakeholders, budget and timeline. By outlining the project objectives and necessities I started the project.
- **Project Planning:** In the Project Planning phase, requirements gathering such as collecting and documenting detailed both functional and non-functional requirements. The scope of the project was defined including boundaries and acceptable criteria to finish the project on the estimated time.
- **Project Execution:** The execution phase turns all the plan into action. I have completed the development activities identified in the planning phase to produce the project requirement. This phase ends by having the project complete after testing process.
- **Project Closure:** Project Closure is the last phase of Project Life Cycle. In this phase I formally closed my project and then report the overall level of success and findings, lesson learned from the project, as well as plan and conduct transferal activities. In this phase I have done analyzing of project, documenting project closure and conducting post-implementation reviews.

1.5.2 Data and Information

Data are collected through interview, observation and internet. It is collected for the purpose of analysis. Information consists of facts that defines the relationship between pieces of data.

The data and information are collected from two major sources:

a. Primary Data

In this project, the data are collected via direct interview and observation. Direct interview was held in the owner of the organization and directly observation in organization.

b. Secondary Data

The information were also collected via internet, newspaper, magazines, books, reports and so on which are secondary sources.

c. Work Process Observation

The working mechanism of the organization was observed closely. It gives the idea about the working system of organization.

1.5.3 Data Collection

All the information has been obtained from first-hand sources, which included conversations with the chief pharmacist as well as on-site observations. Questionnaire also was created to ask the shareholders and the management team of the organization which relatively helped in gaining data for the project.

- **Interview:** It is the most commonly directly through interview and observation. Direct interview was held with the owner of the organization and gather the information that she wants in the system.

Questionnaire

Have you experienced any challenges or difficulties in book management?

Does the store have any kind of website?

What tools were used to record information information about the book order, and sales report before implementing?

What are the drawbacks of manual book ordering system?

- **Observation:** Observation is another technique for gathering information. The activities on the organization were observed and analyzed accordingly. I have visited the organization to observe and find reliable info that will be helpful in the project.
- **Internet :** Internet has a major place for research which has enabled efficient, cost- efficient data collection and provides a large sum of data. Internet has played a vital role during this project.

CHAPTER TWO

TASK AND ACTIVITIES

2.1 Literature Review

Online bookstores have transformed the way people buy books, offering convenience and a wide selection. For consumers, online bookstores provide accessibility and personalized recommendations, while businesses must adapt to digital formats and innovate to remain competitive. The objectives of this review are to examine the evolution of online bookstores, assess the user experience, and analyze business models. By achieving these objectives, this review aims to provide insights into the current state of online bookstores and identify opportunities for future research and innovation.

Mandeep(2022)The internet has become integral to our lives, particularly in the realm of book sales. Book store software efficiently manages various book details and facilitates online purchases, saving customers time and travel costs. Users can easily browse books by category, search by title or author, and make purchases using different payment options. The software allows for quick account creation for new customers and offers advanced functionalities for managing book details and orders.

Shelke(2022)The Internet has revolutionized various aspects of life, notably through e-commerce, including online bookstores. Traditional bookstores face limitations like operating hours and physical space, leading to the rise of online platforms. Our project aims to create a user-friendly website offering a wide range of books for convenient online purchasing.

Yunkai(2017)The internet's growing role in people's lives and the increasing demand for quality and efficiency have highlighted the limitations of traditional bookstores. Online bookstores, which offer a broader selection and greater convenience, have become increasingly popular. They allow users to purchase books from anywhere, saving time and effort. This new system revolutionizes the book industry by prioritizing convenience and service.

2.2 Analysis of Task and Activities

Many tasks and activities had performed which had helped to fulfill the main objective of the project I had done. The most common objectives of the project was to get knowledge about the use of technology in one the organization in the country. Some of the tasks that is performed is given below:

i. Organizational selection

Selection of the the organization is an important decision of the project, as the type of the organization dictates the majority of the requirement of the system. After visiting some local organizations, “SK Traders”was selected for the project as they wanted to extent their stationary shop to online book business platform.

ii. Getting Information about the organization

After the selection of the organization for the project, the remaining tasks became to gather information about the book store. The major methods that was used is direct observation of the procedures carried out by the organization. Also, other information was gathered through the direct interviewing with the owner and staffs of the organization which helped in getting information about the organization.

2.3 Analysis of the Problem

The primary issue addressed by the project was the lack of automated system for book ordering system. Currently, the organization relies on manual methods, which are inefficient and prone to errors and saves data in a copy which causes for the data loss that ultimately hampers the organization. The absence of a computerized system results in difficulties in displaying available books, tracking their price and managing orders with suppliers.

2.4 Feasibility Analysis

A feasibility study was conducted to assess whether implementing online book ordering system is viable. This study examined various factors such as the technical feasibility, and the services delivered by the system. Evaluating these

criteria ensures that the project is technically achievable and capable of delivering the intended services without significant obstacles.

2.4.1 Technical Feasibility

The technical issue usually arises during the feasibility stage of the investigation. Online book store System is a system that effectively and efficiently manage the mass numbers of online book order at the same time.

The current system develop is technically feasible. So, cost of the maintenance will reduce. It provides an easy access to the users and it provides the technical guarantee of accuracy and reliability.

The software and hardware requirements for the development of this project are not many and are already available as free as open source. Also, software can be easily upgraded to accomplish specific user requirements. The programming language and database are open source. The system is based on a real-time database that provides real-time updates to the information change in the database. They all are easily available to the public. This system allows for the feasible work operation of the book Store where the data may change constantly and assures for the availability of real-time updated data. Hence technically there is no limitation for the development of the software

2.4.2 Operational Feasibility

As the website was developed to solve the problem of the organization according to the requirements and the organization is also satisfying with the solution suggested. So, they are ready to operate website once it is developed and operative once it is installed. It is easier to use and there is no need of skilled manpower to use this system. That will meet the organization's operating requirement. This system will provide all the information to customer without having any direct contact to organization. This requirement-based system would ensure the optimal utilization of organizational resources and would also help in the elimination of redundant operations and improve upon organizational performance. The system is extremely flexible since it provides large number of validations on all the entered and avoid error in the calculation.

2.4.3 Economic Feasibility

The organization has evaluated the cost of software and hardware required for the system including storage of data. Once the software is installed and operated, it will definitely save time of the organization and it does not need additional hardware or software. This would insure nominal expenditure for the organization. Also, since the software is easy to use and do not need skilled manpower to use it. The benefits expected from the system are studied to access the cost due to new system.

2.5 Technical Analysis

The Online Book System has been built using technologies such as PHP, MySQL, HTML, and CSS. These technologies were chosen because of their familiarity and stability in hardware environments. Utilizing these technologies ensures that the system is robust, reliable, and scalable to meet the project's requirements

2.6 Requirements Analysis

Requirements analysis mainly focuses on the tasks that determine the needs or conditions to meet the new or altered product or project, taking account of conflict of the various stakeholders, validating and managing software or system requirements. Since we can't manage non-functional requirements, the functional requirement is managed.

2.6.1 Functional Requirement

Functional Requirement are the state where the system responds on the particular input and how the system should behave in the particular situation. A typical functional requirement will contain a unique name and number, a brief summary, and a rational. This information is used to help the reader understanding why the requirement is needed, and to track the requirement through the development of the system. Some of the functional requirements of "Online Book Store" includes:

- Customer should be able to view the books.
- Customer should be able to add to cart the books.

- Customer should be able to register.
- Customer should be able to track their order.
- Customer should be able to place the order and checkout.
- Admin can complete the pending order.
- Admin should be able to add and delete books.

2.6.1.1 Use Case Diagram

Use-case visualizes the interaction between system and actors. In the give use-case diagram, it shows the interaction between Online Book System and actors i.e. Admin and Customer. Use-case diagram shows which actors can perform which functions of the system and the relationship them as well.

Fig 2.1 Use Case Diagram

2.7 System Design

System design is the process of defining the elements of a system such as the architecture, modules and components, the different interfaces of those components and the data that goes through that system. It is meant to satisfy specific needs and requirements of a business or organization through the engineering of a coherent and well-running system. One of the main components of software design is the software requirement analysis. In this project there is one database used for store the information of customer who have register their account in system

2.7.1 Class Diagram

A class diagram is an illustration of the relationships and source code dependencies among classes in the Unified Modeling Language (UML). In this context, a class defines the methods and variables in an object, which is a specific entity in a program or the unit of code representing that entity. Class diagrams are useful in all forms of object-oriented programming (OOP).

Online Book System

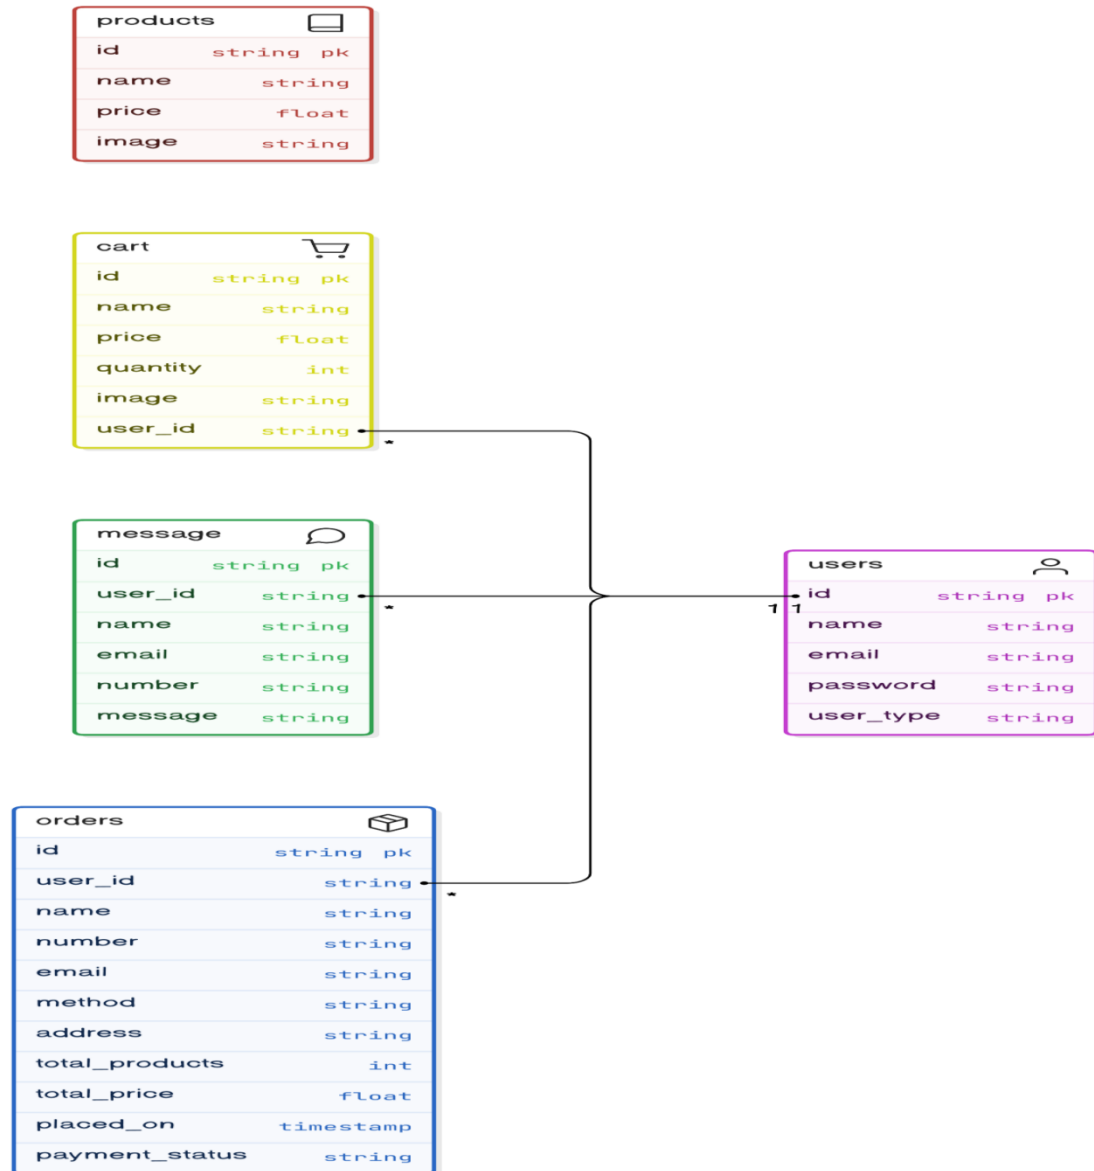

Fig 2.2 Class Diagram

2.7.2 Activity Diagram

An activity diagram visually presents a series of actions or flow of control in a system similar to a flowchart or a data flow diagram. Activity diagrams are often used in business process modeling. They can also describe the steps in a use case diagram. Activities model can be sequential and concurrent. In both cases an activity diagram will have a beginning and an end.

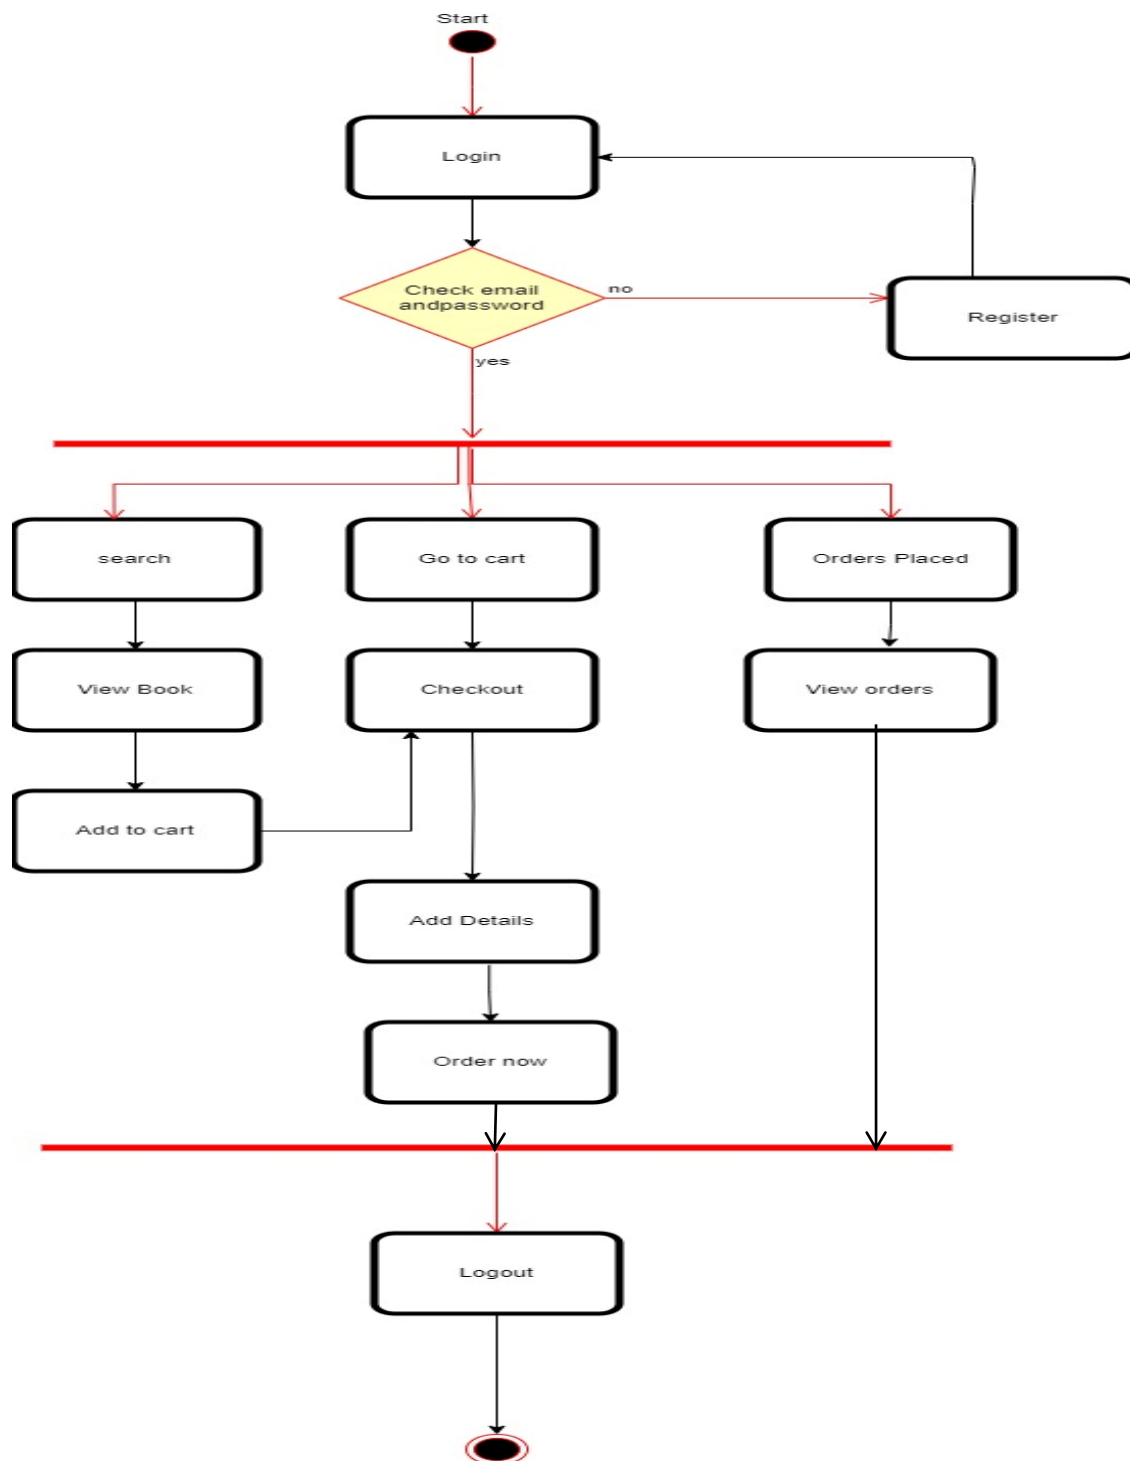

Fig 2.3 Activity Diagram

2.7.3 Sequence I

UML Sequence Diagrams are interaction diagram that detail how operations are carried out. They capture the interaction between objects in the context of a collaboration. Sequence diagrams are time focus and they show the order of the interaction visually by using the vertical axis of the diagram to represent time what messages are sent and when.

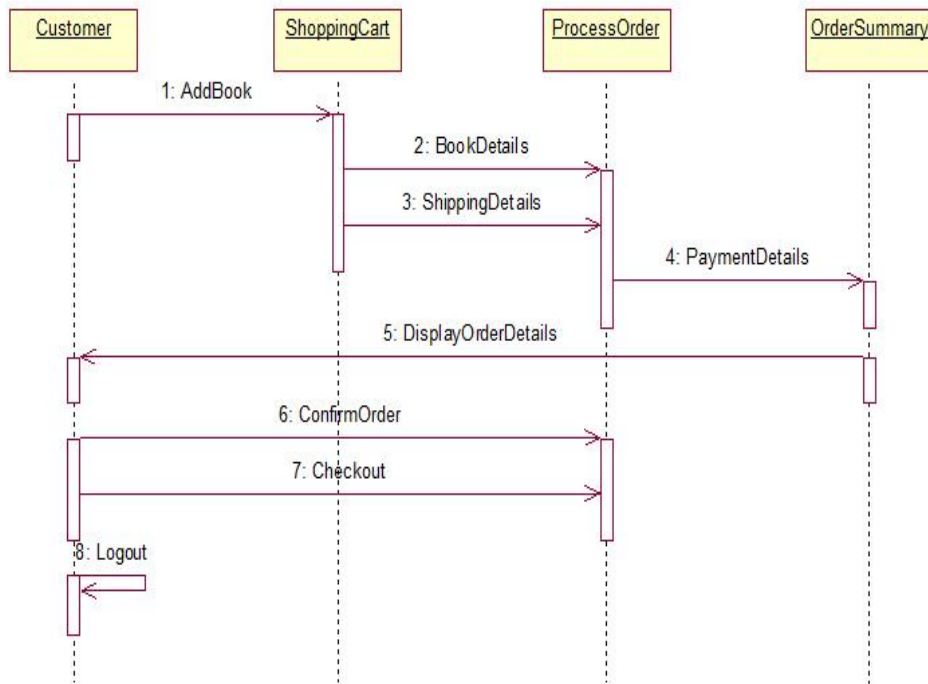

Fig 2.4 Sequence Diagram

2.8 System Implementation

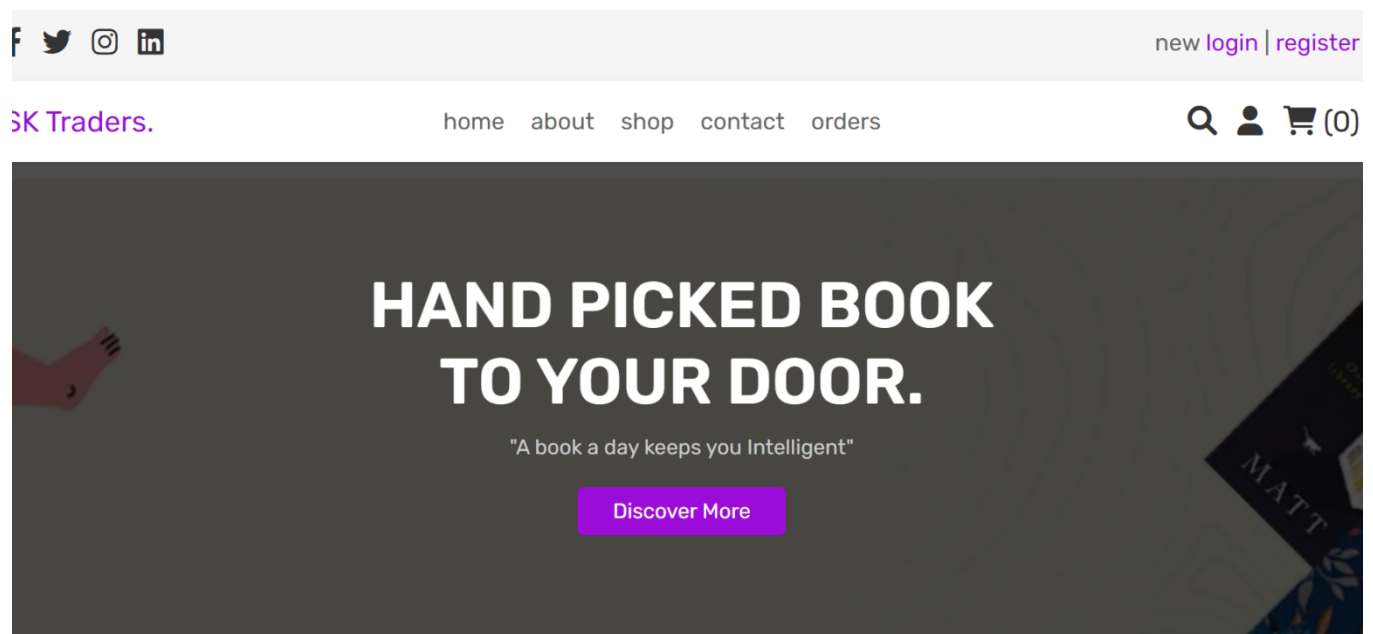

It involves in detailed planning and requirements gathering to understand the objectives and expectations of the SK Trade Concern online bookstore. Meetings with stakeholders helped define the project scope, goals, and timelines. Key requirements included a responsive design, secure payment integration, efficient inventory management, and user-friendly navigation.

2.8.1 Module Description

It shows the different pages of the system and following are different module of these system.

Home Page

Home page shows all the books existing in the system. It includes books desired to buy with price listed and can order the quantity needed and also see the contact details of the organization.

Signup Page

The sign up shows first when we need to enter the website. If the customer doesn't have account, they can register by giving the information asked. All the information provided by the user will validate by the system and if the entered information beyond the required information, then the system will show error message immediately. When the user click on register with the correct provided info, then all the information will be inserted into database.

REGISTER NOW

user

▼

Register Now

already have an account? [login now](#)

Login Page

Customer should register as above mentioned before logging in into the system. When they submit the login form with valid username and password the session will be created. Validation will be performed by checking if the username and password occurred together. If they match with the data in the database, then the user can interact with the page otherwise, the user will be directed to login form with error message.

LOGIN NOW

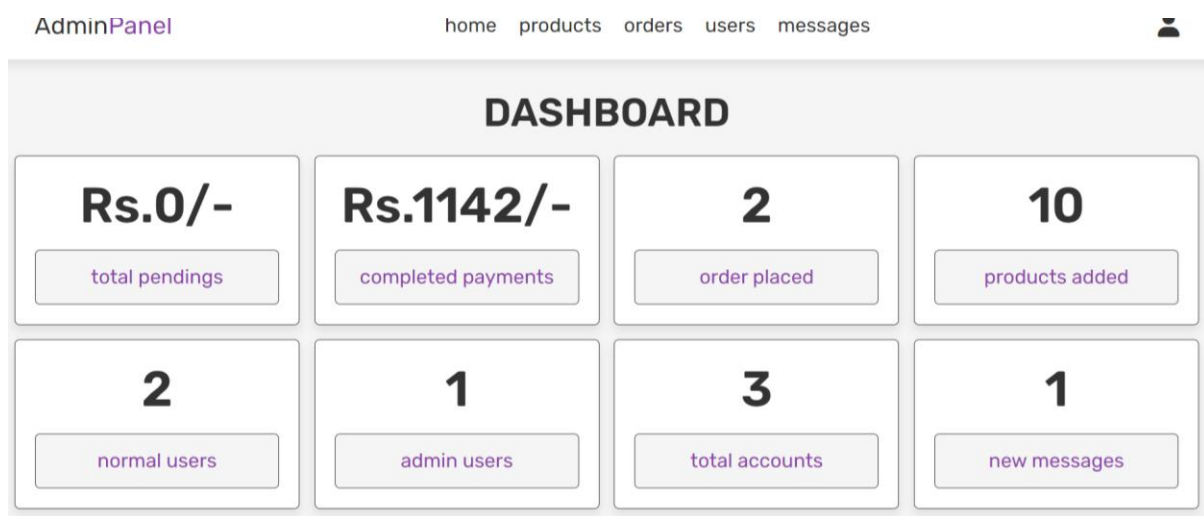

Please fill in this field.

Login Now

don't have an account? [register now](#)

DashBoard

Dashboard is the admin side of the control panel which shows the customers orders, registered users detail information,etc. Admin login to the panel can be done directly from the login page by entering email and password of the admin. After entering, Admin can update books, see orders, can see the number of users and see the message of the users sent.

2.8.2 Tools Used

Html: It is basically used to format text as titles and headings, to arrange graphics on this system and also used to link different pages within a system.

CSS: In this system CSS is used for development sites structure by creating design or outline the html element and describing the presentation to different pages, including colors, layout and fonts.

Bootstrap: In this project, Bootstrap is used for designing and making the website screen responsive. Different components and models are used for attractive user interface.

PHP: PHP code is embedded into HTML for making website dynamic and used for connecting website to database.

MySQL: In this project, MySQL is used for the database management of the system. Different data is stored in the server to make the website dynamic.

XAMPP: It is used for creating and configuring with database which is written in MySQL without internet. .

Microsoft Office: The Microsoft office word document is used for softcopy documentation of the project. All the document design and numeration are done by using Microsoft Office Word 2019

JavaScript: In this project JavaScript is used for creating some animation in page content.

Web Browser: Google Chrome browser is used to the run the localhost system of a project.

Vscode: Vscode is used to write down all the HTML, CSS and PHP code in this project.

2.9 System Testing

System testing is a critical phase in the development of the SK Trade Concern online bookstore, ensuring that all components function correctly and meet the specified requirements. The following outlines the systematic approach taken to test the online bookstore.

2.9.1 Unit Testing

Unit testing was undertaken during the actual implementation of the system. Each time some code was written it was run and monitored for the bug. As bugs were discovered they were corrected by adding code or modifying the existing code. Several bugs were corrected by analyzing the error messages and correcting them by chaining in code. After development of the system has been completed testing was also performed. Functionality testing and interface testing combined to ensure the system functionality as requirement.

2.9.1.1 Test Case

Title: Online book store

Description: The system should be able to have the characteristics of Login functionality.

Precondition: The system's database had username= "admin" and password= "admin"

Assumption: The login U/I has a text field to enter username and password.

Test Steps: a) Open login

b) Enter username and password

c) Press Login

Expected Result: The entered user and password should validate with database's username and password and after validation success, it expected to locate for homepage.

Post Condition: System should to store the activity in the admin panel after the user successfully login into the system

.

Table 2.1: Test Case

Test Case	Test Scenario	Test Data	Expected Result	Status
1	Check Response when invalid username and password is entered	Username= iooo@gmail.com Password=ioii	Message display “incorrect email or password!”	Pass
2	Check response when entered mail without @	Username= user Password= user	Message display “Please include an @ in the email address. ‘user’ is missing an @”.	Pass
3	Check response with blank username and password	Username= Password=	Message display “Please fill in this field”	Pass
4	Check response when correct username and incorrect password is entered	Username= xunilrawat123@gmail.com Password= Sunil	Message display “incorrect email or password”	Pass
5	Check response when valid username and password is entered	Username= sunil@gmail.com Password=admin	Redirect to admin Panel	Pass

Results

incorrect email or password!

2.9.2 Validation Testing

Validation Testing ensures that the online book system has met the specified requirements and fulfills its intended purpose.

Validation testing ensures that the developed online bookstore meets the business requirements and user needs. It verifies that the system functions as intended and provides the expected results in real-world scenarios.

2.10 Findings

The findings main objective is to summarize the results and insights gained from the validation testing phase, identifying any issues, risks, and overall system readiness. In unit testing findings, I identified some minor issues in isolated functions. Later on, all identified defects were fixed promptly. Through the completion of this project various different information could be found out. This has also helped in understanding the problems faced by this type of organization

and their possible solutions. There is a lot difference at classroom and real-life scenario. I have analyzed problems in detail and possible solutions were also analyzed and few ideas were even implemented. As a solution to the problems, this software is designed and developed. I also found out many other ways to use the programming language used while developing the system. This project has allowed for a project-based learning approach to learn about new methods to solve the problem.

CHAPTER THREE

DISCUSSION AND CONCLUSION

3.1 Discussion

The main aim of the project was to design a website of Online Book Store of SK Traders. Being through different difficulties in overcoming those difficulties an overcoming those difficulties with the help from different sources this project has been successfully completed . It highlights how these features enable administrators to securely login, edit books, add books, make payments and ensure efficient supply chain management. The system's intuitive interface enhances usability, while potential enhancements and recommendations aim to further improve functionality and address any identified limitations, ensuring continued effectiveness in managing books.

3.2 Conclusion

The “Online Book Store” project is that the system works well in helping managing books and take orders effectively. It allows users like administrators and clients to do their tasks easily and securely. Features like keeping track of the orders, updating pending and completed status are important and work smoothly.

I have been able to update myself about the current demand and trends of IT market has gradually built professional knowledge and networks with various IT personalities which would be very beneficial for my professional career. This project pushed me and helped me to get a practical exposure to working environment. It taught the importance of the communication skills and technological matter. It was a great learning experience for me.

Overall, the system is a useful tool in making sure books get to where they're needed and improving customer's response.

3.3 Future Enhancements

Although the project has been completed and able to overcome the problem of the study, even if some problems are solved by this project and still problems and requirement are not implemented by this project which can be solved in upcoming days. Some of the future enhancements of this project are:

1. Online Payment System like E-sewa, Khalti and other mobile banking can be added.
2. Module that makes receipt and prints can be added.
3. Module that provides daily count of view on the site can be added.
4. Other necessary module can be added.
